

Breathe as if you were at the ocean Simple. Healthy. Sustainable.

Know what makes you healthy.

From time immemorial, the inhalation of saline water particles has been used as a supportive respiratory therapy which soothes and naturally relieves coughs, colds, allergies, asthma and other respiratory illnesses. The conscious inhalation and exhalation acts in a physically and mentally relaxing manner so that the active regeneration and health of your body is noticeably promoted.

We recommend the salivent® Aerosol Inhalator for

Coughs, colds, hoarseness

Hay fever, allergies and asthma

Chronic and acute respiratory illnesses

Inflammation of the respiratory tract, nose and sinuses

All the power of the ocean in one device.

■ The salivent® principle

The conscious inhalation with short pauses creates fine and the finest respirable aerosols with a mass median between 1 and 2 μ m. These reach the bronchia and the finest alveoli – warmed to a pleasant 38°C body temperature – via the nose and throat.

Here they exert their effects and

- ease breathing
- stimulate the mucous or secretion formation
- ease expectoration
- act as anti-inflammatory
- stimulate the self-cleaning strength of the body

■ The ocean every day

Dosing

Please clean your salivent® thoroughly prior to use and dose the water and sea salt corresponding to the salivent® operating instructions.

Warming up

Now close the device, attach the breathing mask and connect your salivent® for approx. 30 minutes with the mains.

In this way, the contents are warmed up to a pleasant 38°C body temperature.

Simply inhale

Remove your salivent® from the mains outlet and inhale. Enjoy the refreshing, saline air - like being at the ocean - which reaches the deepest parts of the lungs as the finest aerosols.
